

Order Entry

Turns an incoming customer PO into a live job inside ProShop — the first paid step, and the record every other role inherits.

PRE-PRODUCTION

“Getting the order into ProShop is like getting the keys into the ignition — it's where the whole shop starts moving.

WHO THEY ARE

Order Entry (often the same person as Customer Service) transcribes a customer's purchase order into ProShop, verbatim and completely. They surface the terms and quality requirements hidden inside the PO and its linked documents, acknowledge the client, and create the part header and work order so PMs, planners, and buyers can pick it up. This is the first point in the workflow where the shop is actually being paid to work.

In small shops this is the owner or ops manager. In larger shops it's a dedicated seat watching email and customer portals all day, entering same-day and confirming within 24–48 hours.

A DAY IN THE LIFE

PO in	Watches email and customer portals (Boeing, Lockheed, Collins) for new orders. Downloads the PO and reads it end to end .
Ack	Sends a 'received, under review' acknowledgement so the client knows the order landed. Logs it same-day.
Header	Transcribes admin block verbatim : bill-to, ship-to, payment, tax, FOB, delivery priority, project code.
Lines	Enters each line — part #, revision, quantity, price, promise date, order type.
Build	Creates the part header (auto-builds folder, inventory table, rev control) and the work order for planning.
Confirm	After technical review OKs dates & pricing, sends the formal order confirmation back to the client.

SNAPSHOT

Workflow stage	Pre-production
Also known as	Customer Service
Reports toward	Sales / Ops
Entry standard	Same day
Confirm standard	24–48 hours

ENVIRONMENT & TECH COMFORT

Desk-based, email- and portal-heavy, mouse- and-keyboard. Comfortable navigating many customer portals and reading dense contract documents. Values speed and accuracy over exploration — wants the fewest clicks between PO and work order.

Software proficiency	High
Contract / document literacy	High
Tolerance for repetitive entry	Low

IN THEIR WORDS

“Every customer's PO looks different, and half the important stuff isn't even on the PO — it's buried in the terms they link to.”

WHAT DRIVES THEM — AND WHAT GETS IN THE WAY

The lens Product & Design should hold when building for this user: what they're trying to achieve, where the current experience fails them, and what they need from the product to succeed.

● GOALS

- Get orders in fast and clean so no downstream seat is blocked.
- Surface risky terms early — DPAS ratings, ITAR, cosmetic class, masking notes.
- Give the client a professional, predictable acknowledgement and confirmation loop.
- Cut the manual click-count between PO, part, and work order.

● FRUSTRATIONS

- Every customer's PO looks different — there's no standard template to lean on.
- Key terms live in linked web pages, not on the PO itself.
- Portals must be checked daily; dates can change silently inside them.
- There's no built-in acknowledgement form — it's done manually by email.

● NEEDS FROM PROSHOP

- A guided PO-entry flow that flags missing bill-to / ship-to / terms before submit.
- A single view that reconciles PO line items against the original estimate.
- Built-in acknowledgement and confirmation templates, not manual email.
- Portal-change alerts so a silently moved date doesn't slip through.

THE NUMBERS THEY'RE MEASURED ON

Same-day

Rate of POs entered the day they arrive (order-date vs. entry-date).

24–48h

Order-confirmation turnaround back to the customer.

Accuracy

Zero fat-fingered quantity, price, revision, or promise date.

Coverage

No missed orders sitting unseen in a customer portal.

WHERE THEY SIT IN THE FLOW

UPSTREAM

The Estimator

Hands over the won quote / estimate

WON QUOTE

THIS PERSONA

Order Entry

Transcribes the PO; creates part header & work order

WORK ORDER

DOWNSTREAM

Planner / PM

Picks up the WO and builds the config plan

Everything Order Entry enters becomes the audit trail every other seat relies on — planning inherits it, purchasing inherits it, quality inherits it, accounting inherits it. A missed DPAS or ITAR flag here becomes real legal exposure downstream.
