

Accounting

Closes the financial loop — turning a shipped job into an invoice, and matching every supplier bill so the shop actually gets paid for the work.

POST-PRODUCTION

“ The part shipping is only half the job — it isn't finished until it's invoiced, paid, and reconciled.

WHO THEY ARE

Accounting sits at the tail of the workflow, converting completed work into money in and money out. They generate customer invoices from packing slips, push them into the accounting package, mark customer PO lines complete, and generate vendor bills in ProShop to match against supplier invoices. They're the bridge between the shop-floor system of record and the financial system of record.

In small shops this is the owner or a bookkeeper doing it part-time; in larger shops it's a dedicated finance seat, often working across ProShop and a separate accounting platform like QuickBooks via integration.

A DAY IN THE LIFE

- Invoice** Generates the customer invoice **from the packing slip** — the shipment is the trigger.
- Sync** Adds the invoice to the accounting package, via integration or manually.
- Close** Checks 'WO complete' on the customer PO line to mark it invoiced and done.
- Bills** Generates vendor bills in ProShop to match against incoming supplier invoices.
- Match** Reconciles invoices to customer payments and bills to supplier invoices in the accounting software.
- Report** Feeds job-cost actuals back so the shop knows which jobs actually made money.

SNAPSHOT

Workflow stage	Post-production
Invoice trigger	Packing slip
Works across	ProShop + accounting SW
Closes	Customer PO lines
Two-way	Invoices + vendor bills

ENVIRONMENT & TECH COMFORT

Desk-based, spreadsheet- and finance-software-fluent, mouse-and-keyboard. Lives half in ProShop and half in a dedicated accounting platform, so the quality of the integration between them is a daily reality. Values reconciliation accuracy and a clean audit trail over speed.

Software proficiency	High
Manufacturing depth	Low–Medium
Tolerance for reconciliation errors	Very low

IN THEIR WORDS

“If the invoice doesn't tie cleanly back to the PO line and the packing slip, I'm chasing paper across two systems to figure out what we actually owe or are owed.”

WHAT DRIVES THEM — AND WHAT GETS IN THE WAY

The lens Product & Design should hold when building for this user: what they're trying to achieve, where the current experience fails them, and what they need from the product to succeed.

● GOALS

- Invoice accurately and promptly so cash comes in on time.
- Match every supplier bill to its PO and receipt with no leakage.
- Keep ProShop and the accounting package in clean, reliable sync.
- Give leadership true job-cost actuals — which work made money.

● FRUSTRATIONS

- Invoicing spans two systems, so integration gaps mean manual double-entry.
- A WO left un-closed on a PO line quietly stalls the invoice.
- Vendor bills and supplier invoices can drift out of match without a clear flag.
- Job-cost actuals depend on operators tracking time honestly upstream.

● NEEDS FROM PROSHOP

- A rock-solid accounting integration — invoices and bills that sync without rekeying.
- A clear queue of shipped-but-not-invoiced jobs so nothing is missed.
- Bill-to-PO-to-receipt three-way matching surfaced inside ProShop.
- Trustworthy job-cost roll-ups that reflect real time and material.

THE NUMBERS THEY'RE MEASURED ON

DSO

Days sales outstanding — how fast invoices convert to cash.

Match rate

Supplier bills cleanly matched to POs and receipts.

Invoice lag

Time from shipment to invoice sent.

Job margin

Actual profit per job vs. the original estimate.

DOWNSTREAM

The Estimator

Uses real job margins to sharpen future quotes

Accounting closes the loop the Estimator opened: real job-cost actuals flow back so the next quote is sharper. This persona is reconstructed from ProShop's HR onboarding deck and product docs rather than a dedicated persona session, so treat its detail as directional pending validation.

Source: ProShop HR onboarding deck + product docs. No dedicated persona session existed for this role — validate before treating as authoritative.
